Thanks, Jason. Do you think that this is now complete for SFD?

Ronna, here some additional information from ERBs. Thanks.

EPA monitored and conducted oversight of BP remediation activities until April 9, 2014 with the completion of the Oiled Shoreline Assessment (SCAT Report). The Report found that no sunken oil or sheen was present in 36 locations in Lake Michigan. BP will monitor the beach area and the multi-agency SCAT team will revisit the site this summer for a final walkthrough.
